Ni Sun

@NisunSun

- Sunny Sun is one of the most experienced coaches and consultants in the Agile enterprise transformation space in China.
- She successfully led Agile transformation and Scrum/Kanban adoptions for her clients' companies, including the industries of telecommunications, internet, finance, education, production, machinery, etc.
  - Coached 200+ Agile teams & 300+ Scrum Masters;
  - Helped 100+ organizational top leaders to build Agile leadership;
  - Impacted 2500+ people.

## RESULT

## SUMMARY

A traditional East Asian ink wash painting depicting a dragon amidst turbulent, swirling waves. The dragon is rendered with intricate scales and a fierce expression, emerging from the center of the composition. The waves are characterized by dynamic, rhythmic brushstrokes that create a sense of movement and depth. The overall style is expressive and atmospheric, typical of classical Chinese or Japanese ink art.

**BACKGROUND**

- A leading global telecommunications equipment and network solution provider.
- 50,000 employees worldwide.

# Organization and Products

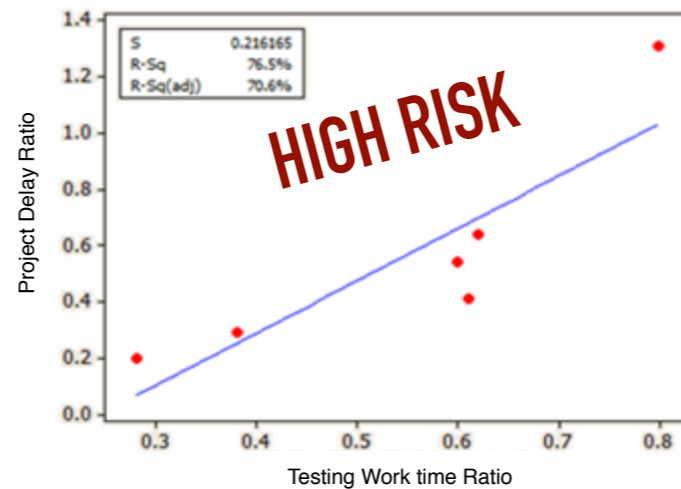

- 500+ people.
- 5 major products; each product has billions RMB sales volume.
- Complex product: 10-million Lines of Code, Application+Platform, Software+Hardware.
- Flagship product profit ramping down.

# Pain Points of Giant Dragon

Very long Lead Time

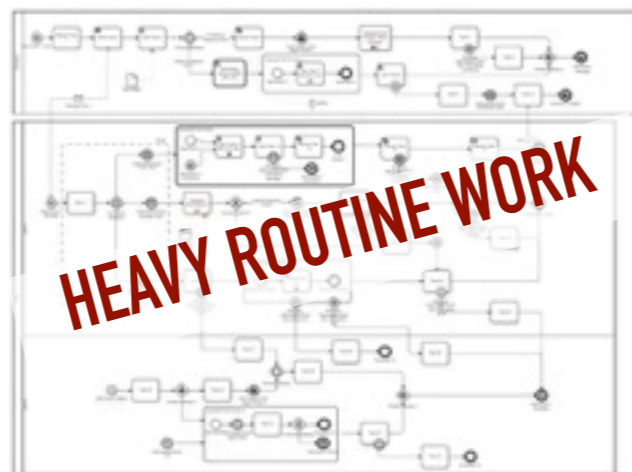

Projects delay

Long defects convergence time

Too many customization  
Too many versions

Heavy Process

Bureaucracy

# External Enterprise Agile Coach

Invited by the Head of EPG  
(Enterprise Process Group ) in  
November 2014

Lead Agile Transformation for  
Fixed Network Business Unit

## BUSINESS

Reduce TTM (Time to Market)

Hardware Development

Integration & System Testing

Pre-production

A traditional East Asian ink wash painting depicting a dragon amidst swirling waves. The dragon is the central focus, rendered with intricate scales and a fierce expression, emerging from the water. The waves are depicted with fluid, rhythmic lines, creating a sense of movement and depth. The background is a mix of dark and light ink washes, suggesting mist or a vast, open sea. The overall style is characteristic of classical Chinese or Japanese ink painting.

## Team Swarming

Skills

## Key Skill

# Pilot Success

- Continuous Integration system was built and running
- Team members' competence increased rapidly
- Skills expanded to architecture design, requirement analysis and system testing
- Found 8 critical bugs during the system testing in the 3rd pilot sprint
- Feature development cycle time decreased from 32 days to 20 days

## TFS (Team Foundation Server) Training

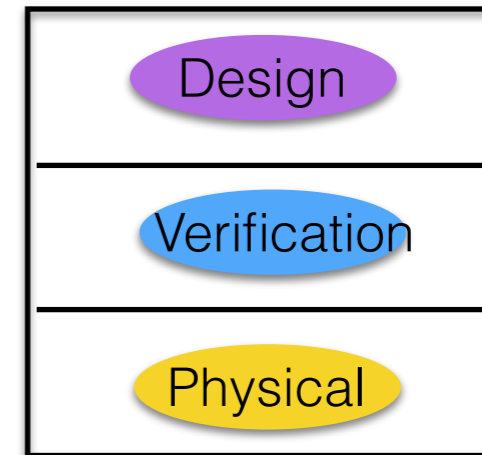

# Hardware Agility Challenges

## 1. Background:

Hardware department (50 people):

- Functional teams act independently. Design and verification don't normally share goals.
- Common software is out of the hardware scope (out of the loop).
- SoC (System on Chip): ASIC/FPGA+Embedded processor + Software

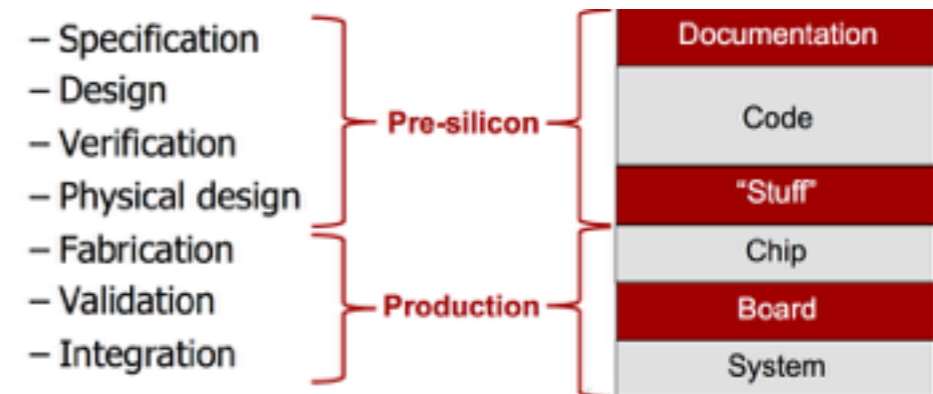

Building B  
Hardware Department

Building A  
3 R&D Departments

## 2. The big challenges we face:

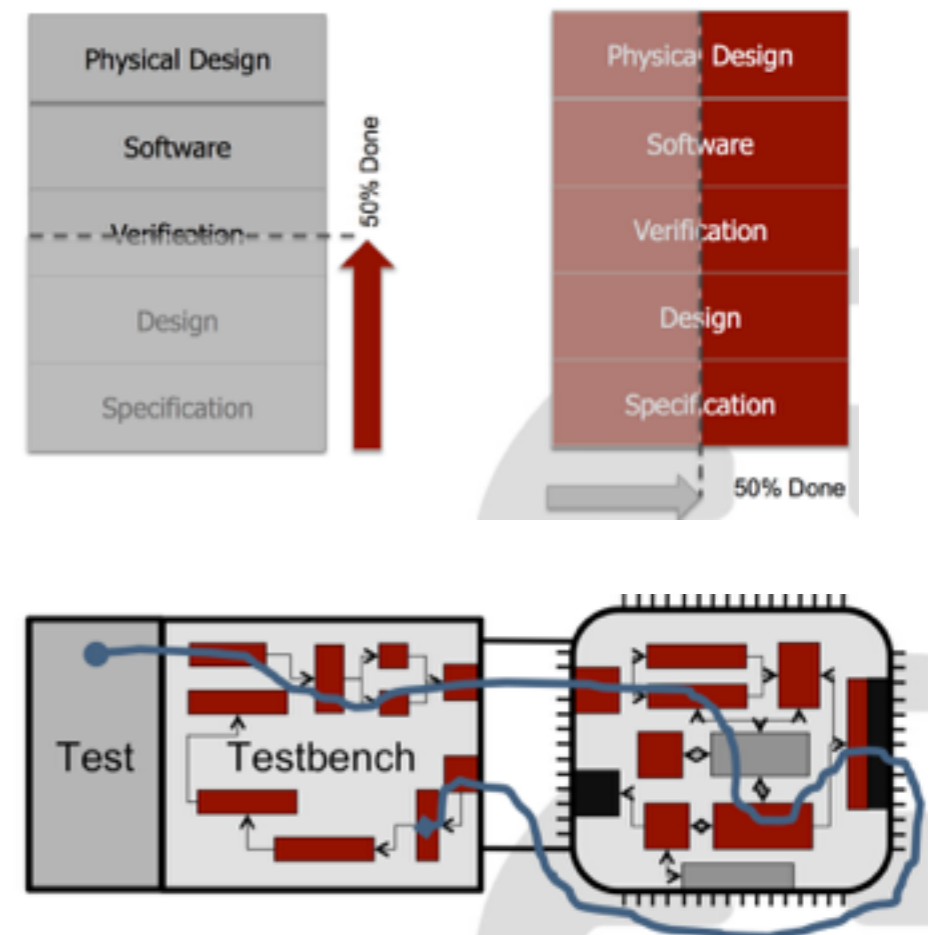

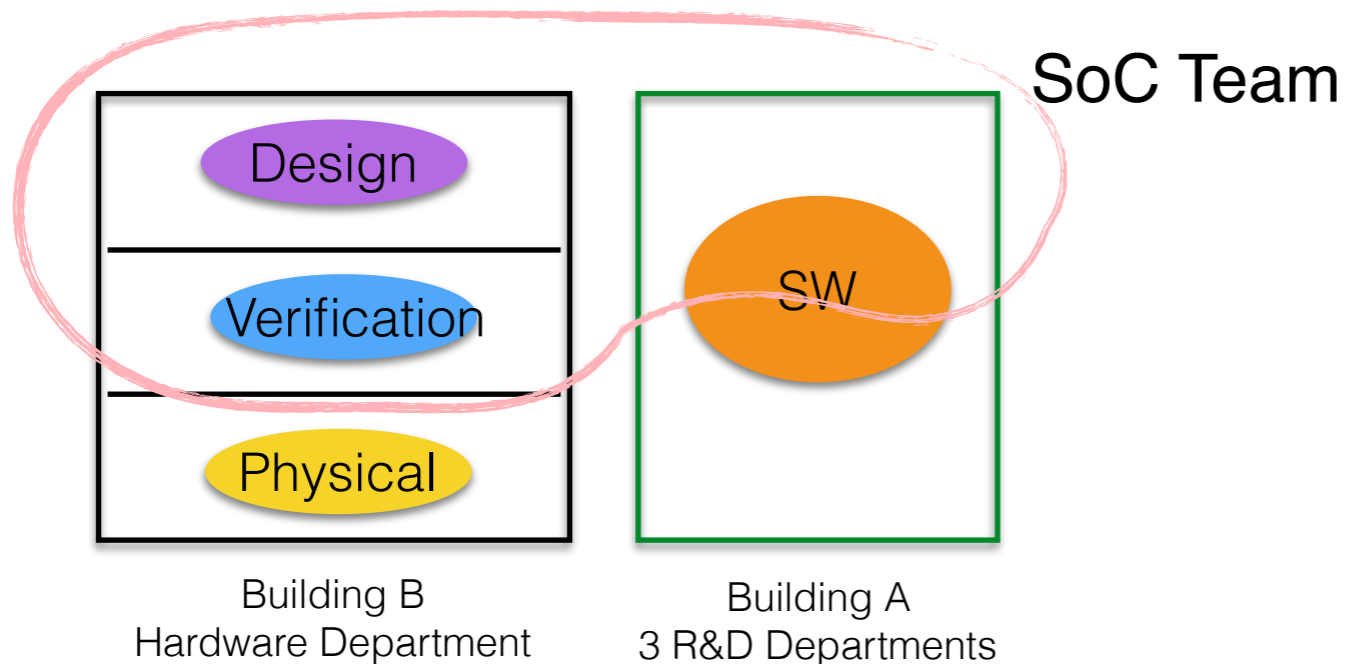

- Hardware Long development cycle > 1.5 year.
- Long correction time for hardware defect.
- SW and HW more and more far away from each other.

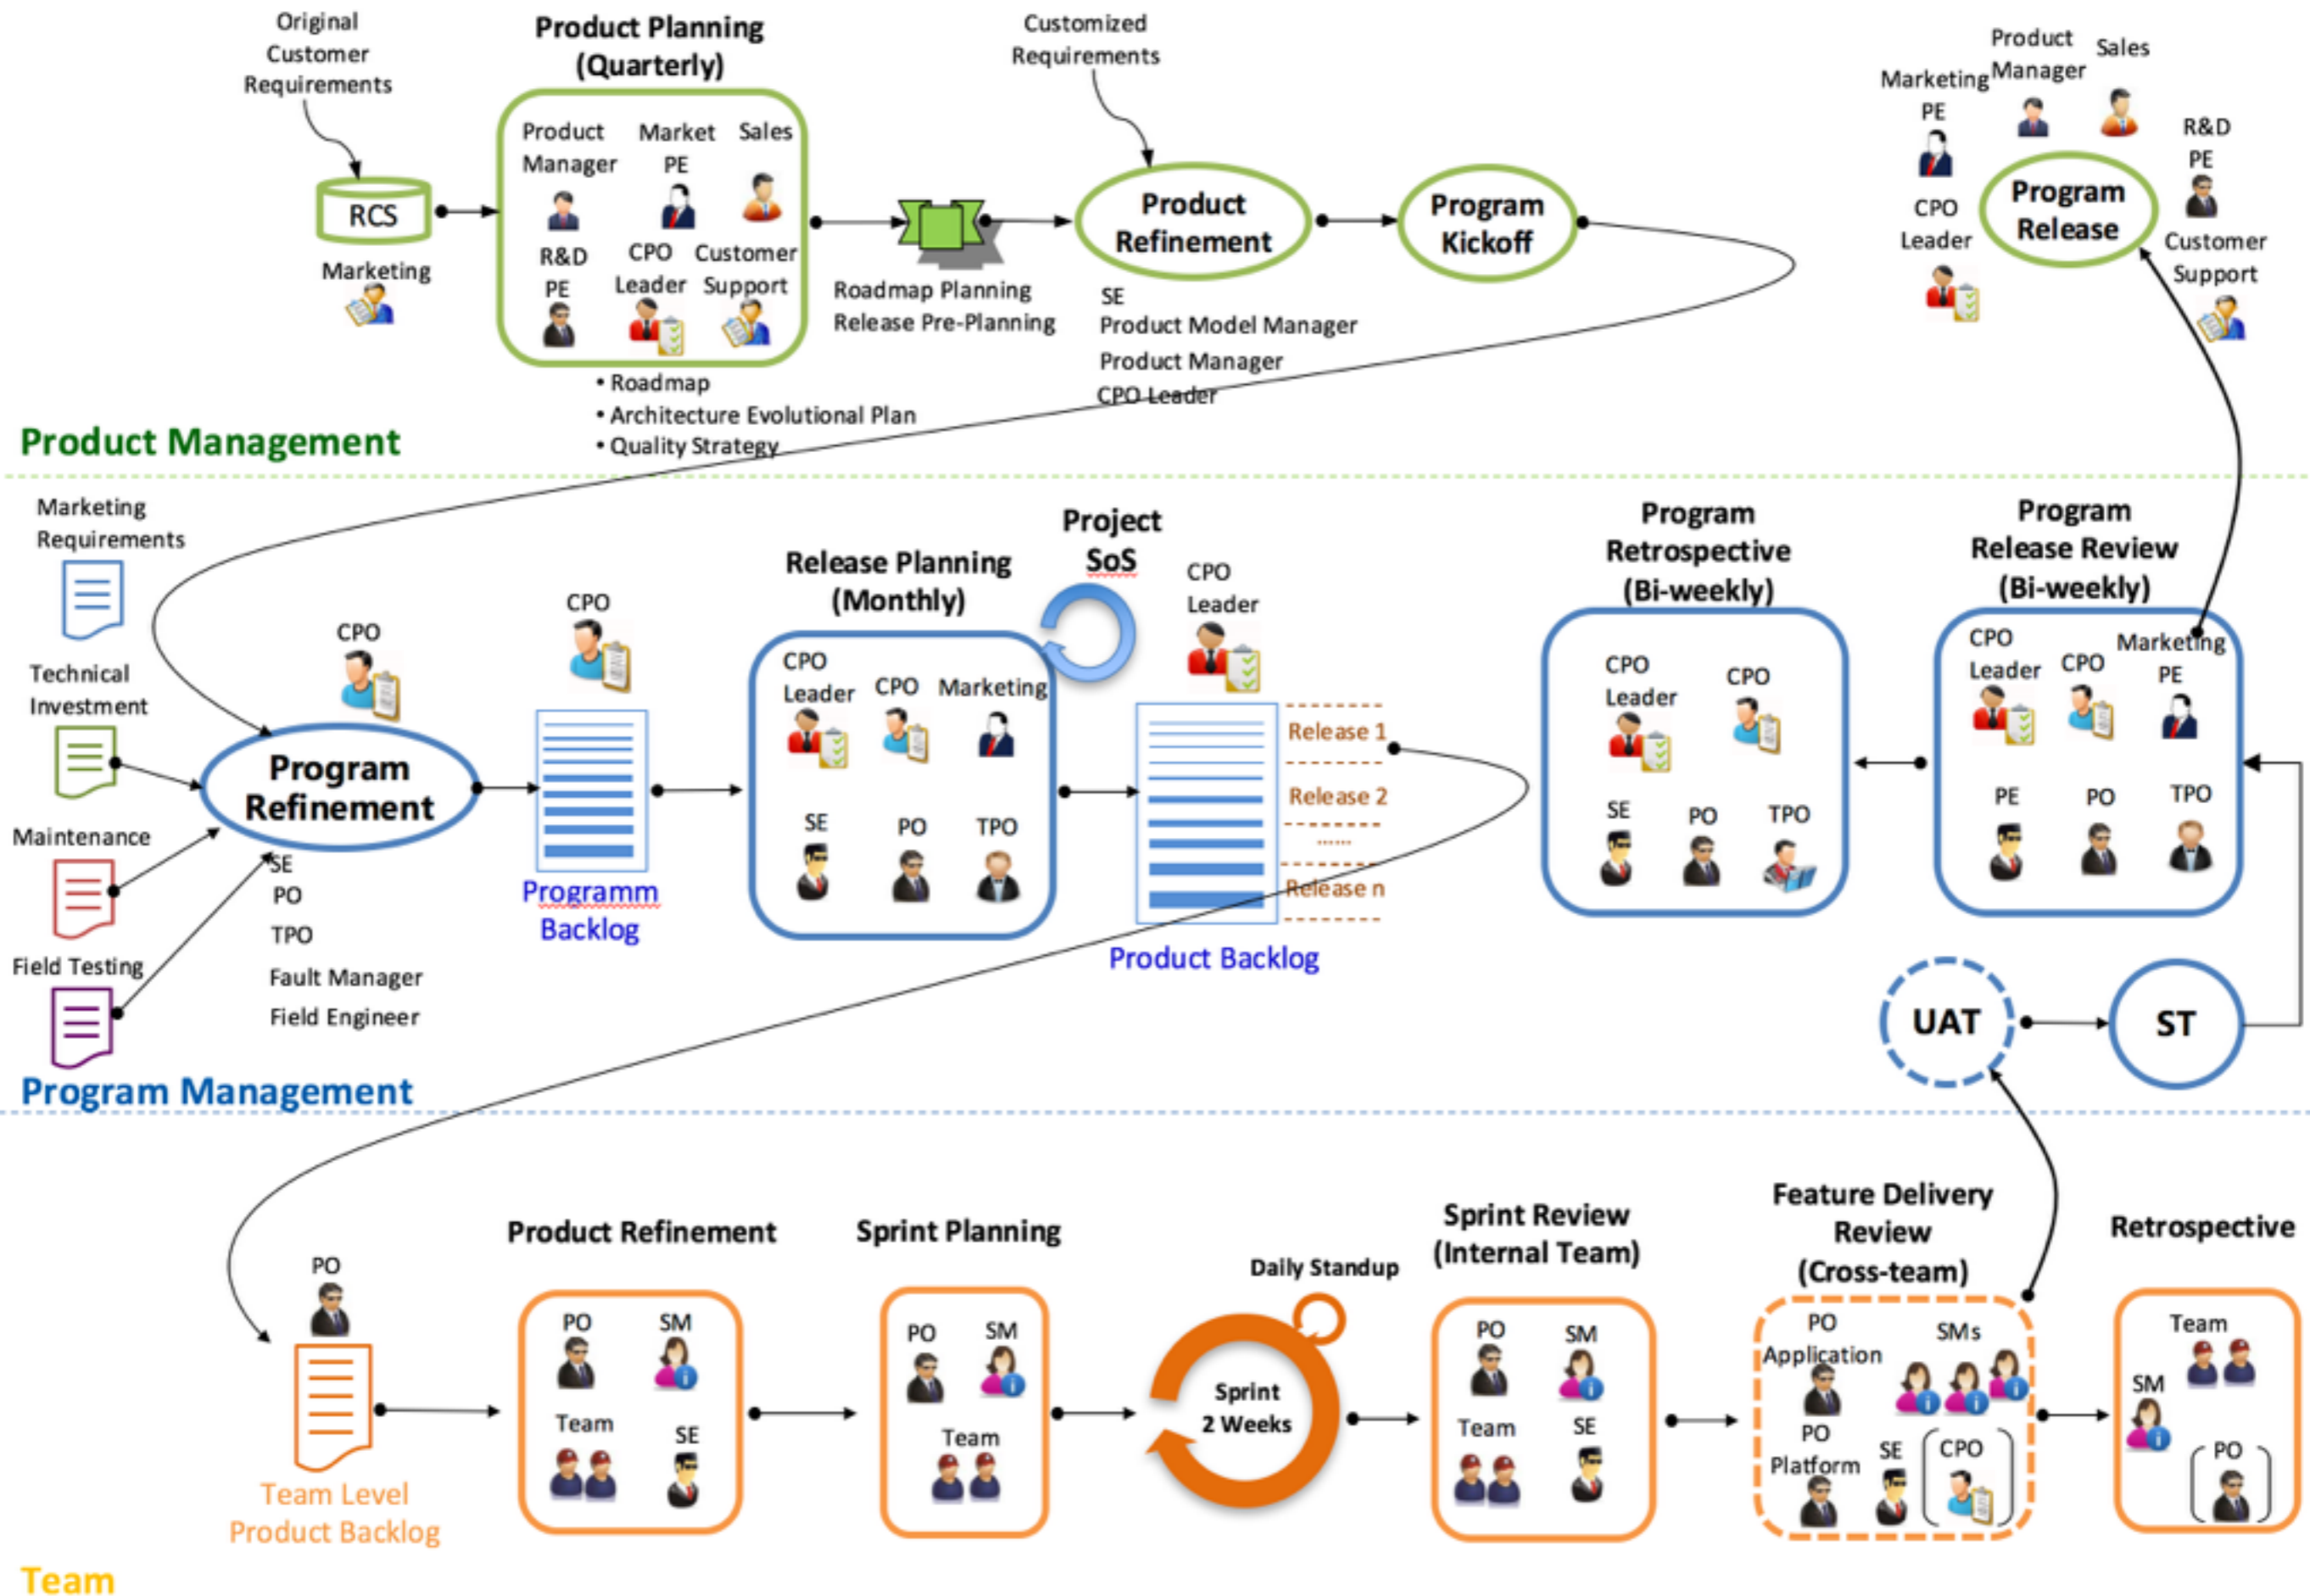

# Hardware Agility Solution

## Solution:

- Create shared Product vision and goal in HW and SW departments.
- ONE product backlog.
- Create SoC Team (Design+Verification+SW)
- Adopt Scrumban in SoC Team
- Change traditional waterfall to Agile Iteration
- Learn before Development: Operation Basic Sanity:

# Hardware Agility in Large Agile Transformation

## 1. Background:

Hardware department (50 people):

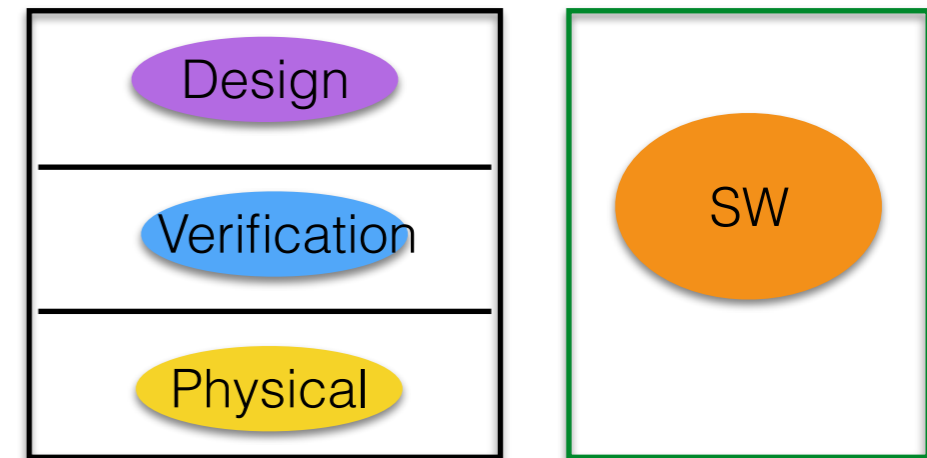

- Functional teams act independently. Design and verification don't normally share goals.
- Common software is out of the hardware scope (out of the loop).
- SoC (System on Chip): ASIC/FPGA+Embedded processor + Software

## 2. The big challenges we face:

- Hardware Long development cycle > 1.5 year.
- Long correction time for hardware defect.
- Because of the large cost of the SW&HW integration, SW R&D don't want to upgrade the new developed chip(new generation chip), even though by knowing how huge investment it was. That results SW and Hw more and more far away from each other.

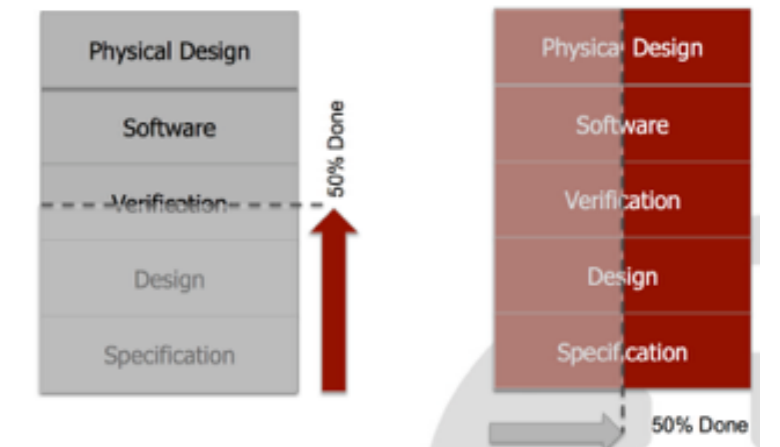

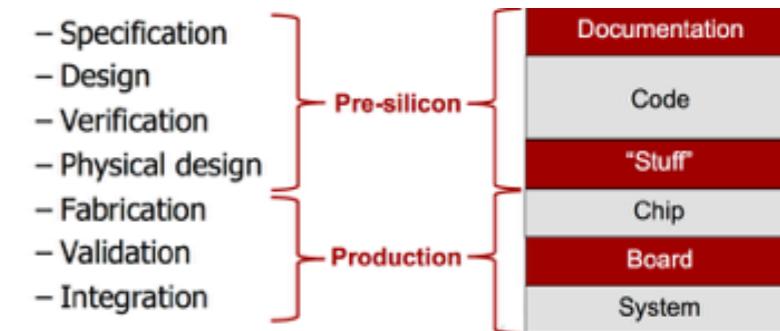

## 3. The Solutions for Hardware agility:

- Create shared Product vision and goal in HW and SW departments. Abolish separated KPIs.
- Include HW development contents into TFS (Team Foundation Server); HW shares ONE Product Backlog with SW R&D departments.
- Create SoC Team (Design+Verification+SW): Move HW teams to seat with SW Drivers and OS team, in order to:
  - Verify the new developed functionality together;
  - Investigation defects together;
- Adopt Scrumban in SoC Team: Use Kanban to visualize the work, manage the flow and limit WIP; Launch the Scrum ceremonies of Planning, Daily Standup and Review. 2 Weeks of Sprint, monthly Retrospective.
- Change traditional waterfall: (Specification->Design->Verification->Software->Physical Design) to Agile Iteration: slice of (Specification+Design+Verification +SW+Physical Design) // See picture of right down corner.
- Learn before Development: Operation Basic Sanity:
  - Start with a finished product
  - Identify the sanity path
  - Remove everything that don't need
  - Plan how to build what's the left
